May Wes: Closing Wheel Alternative Choice to Stock Wheels on CASE-IH SDX Drills in No-Till Applications

Solid UHMW Closing Wheels solved problem of common wheel failures and replacements.

Hutchinson, Minnesota (November 22, 2011) -

May Wes has always been an innovator of the Ag equipment after-market components by leveraging our expertise with UHMW Polyethylene material. The May Wes Solid Closing Wheels are an example of this innovation.

Why are May Wes's Solid Closing Wheels a better choice? Our Closing Wheels are produced with UHMW poly material and compression molding process which result in a durable wheel. This solid construction is superior compared to the OEM closing wheels that are molded as halves or made of steel.

Our UHMW poly material is exceedingly strong and rigid...far more durable than rubber. The May Wes Closing Wheels will flex when encountering obstacles and will return to their original molded position because of the materials 'shape memory' properties. The non-stick surface of the poly material helps keep the wheel cleaner than factory steel wheels. May Wes Solid Closing Wheels will not break or corrode.

A first-hand account of our Closing Wheel compared to the OEM:

"I have a Case IH SDX 40 air seeder and had to replace up to 12 of the OEM closing wheel a day! My dealer recommended going with an alternative closing wheel from May Wes. These new solid smooth poly closing wheels were remarkable. I couldn't believe the results. I have run with these for 2 years now without any broken wheels. I have since got a bigger air seeder and immediately switched the closing wheels to May Wes's. I'd highly recommend this product!" *Mark Rorbach, Bowdle, SD*

May Wes Solid Closing Wheels come in two sizes: 10" and 12" outside diameter. Visit our website to learn more about the Solid Closing Wheel: http://www.maywes.com/closing_wheels .

Since 1972, May-Wes Manufacturing has been working with poly-based products and assures all products have been FIELD-TESTED and FARMER-APPROVED before it's sold. May Wes is a division of Pride Solutions and is located in Hutchinson, MN, USA
