May Wes: Introduces Tractor Stalk Stompers for Case IH Quadtrac 600

May Wes keeps pace with Case IH's latest redesigned Quadtrac tractor line

Hutchinson, Minnesota (December 8, 2011) -

May Wes lays claim to being the original manufacturer of "STALK STOMPER" with nearly 40 years of proven experience. Our engineering resources are mindful of the latest implement redesigns and the impact to their Tractor Stalk Stomper product offerings. We are pleased to announce the release of our latest Tractor Stalk Stomper application for Case-IH's new 4WD Quadtrac 600.

May Wes worked cooperatively with Marlen Hansen from Estherville, Iowa, for field testing the new product using 38" wide shoes to protect his Quadtrac's 36" wide track. Marlen stated *"I had great success in the past using May Wes's Tractor Stalk Stomper assembly on my Quadtrac 535, working 8,000 acres over the last few years. When I replaced my 535 with the new 600, I wanted to continue using the May Wes Stalk Stomper to protect my tracks. I tested their new design on 683 acres and the Stalk Stomper performed to my expectations. I would highly recommend May Wes's Tractor Stalk Stomper for the new CASE Quadtrac 600"*.

Why May Wes Tractor Stalk Stomper?

May Wes's Tractor Stomper solution works off existing tractor hydraulics, is robust and versatile compared to other products. The Tractor Stalk Stomper is designed for quick assembly and installation because there is no drilling or welding required and is built around a standard 4" X 4" tube. Each assembly is configurable and can be customized to fit a wide range of tractor applications. Our shoes come in multiple widths, including 9", 20", 32", and 38".

What's next?

In spring of 2012, May Wes engineers will be expanding the row crop application for their Tractor Stalk Stomper product line.

About May Wes

Since 1972, May-Wes Manufacturing has been working with poly-based products and assures all products have been FIELD-TESTED and FARMER-APPROVED before it's sold. The company has always been an innovator of the Ag equipment after-market components leveraging expertise with UHMW Polyethylene material. May Wes is a division of Pride Solutions and is located in Hutchinson, MN, USA.
